

# MANYME

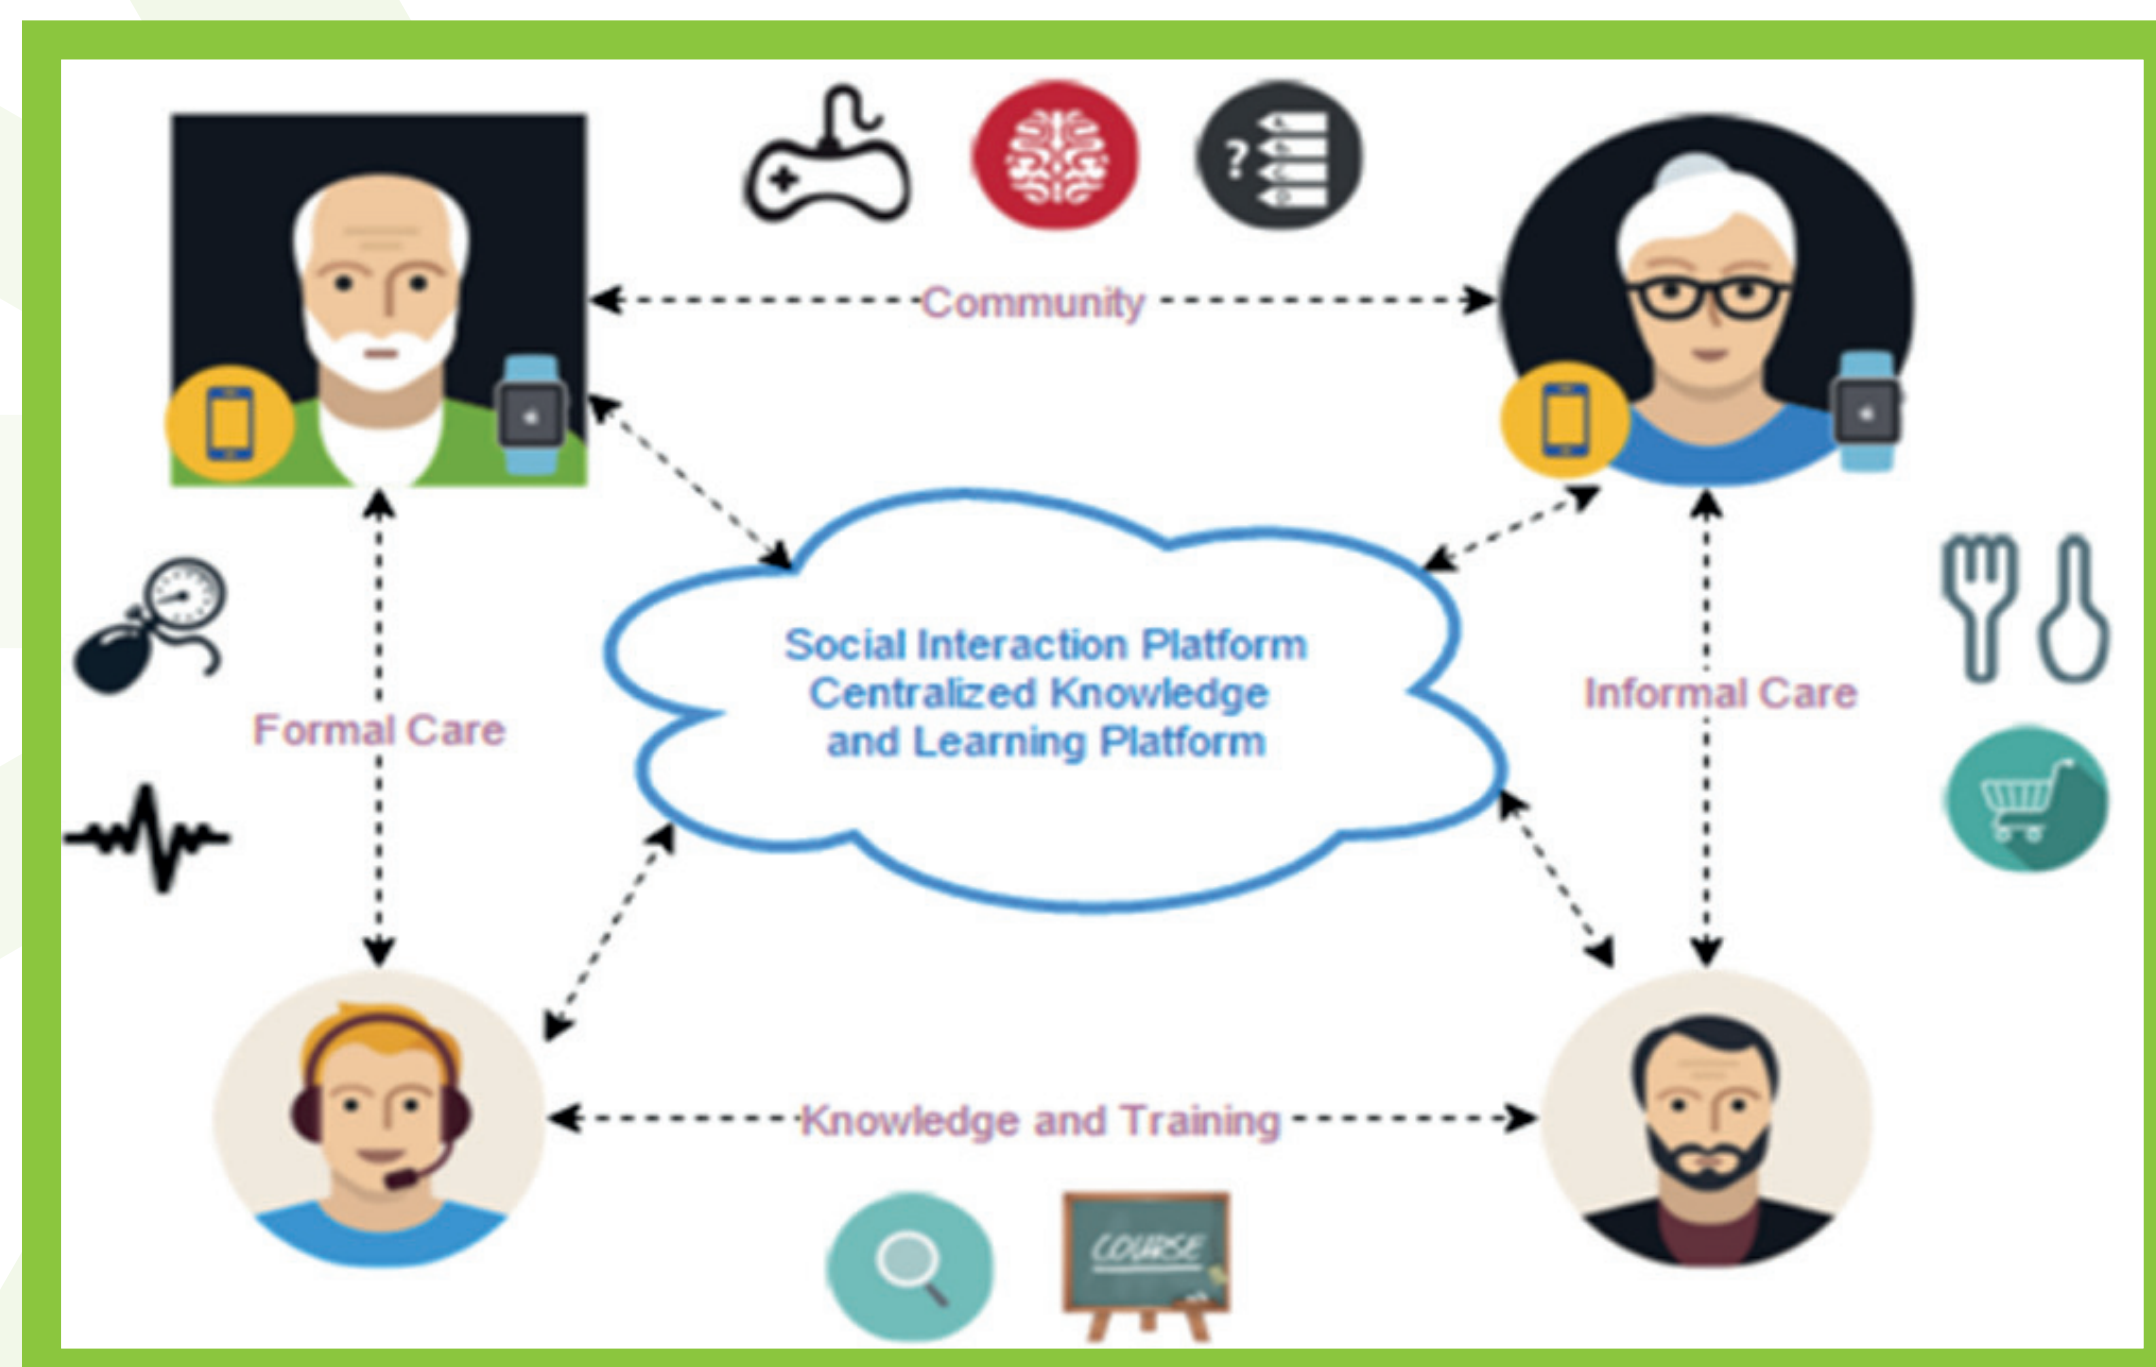

## YOU ARE NOT ALONE WITH YOUR PROBLEMS!!!

FRIENDLY SYSTEM FOR PEOPLE WITH DEMENTIA AND THEIR CAREGIVERS

### What is Many-me about?

Many-Me is connecting people, making them feel they are not alone or helpless, empowering them to help themselves and stay active through the use of smart assistive technology, specifically designed for patients in early and middle stages of dementia.

The objective of Many-Me is to develop a social interactive care system based on ICT assistive technology and user – centred services and offer dementia patients and carers innovative solutions and support to cope with the disease and live an active and meaningful life for as long as possible.

### How is the system useful?

Many-Me platform offers a variety of functionalities and the aim is to support the whole community dealing with dementia. It offers such services as:

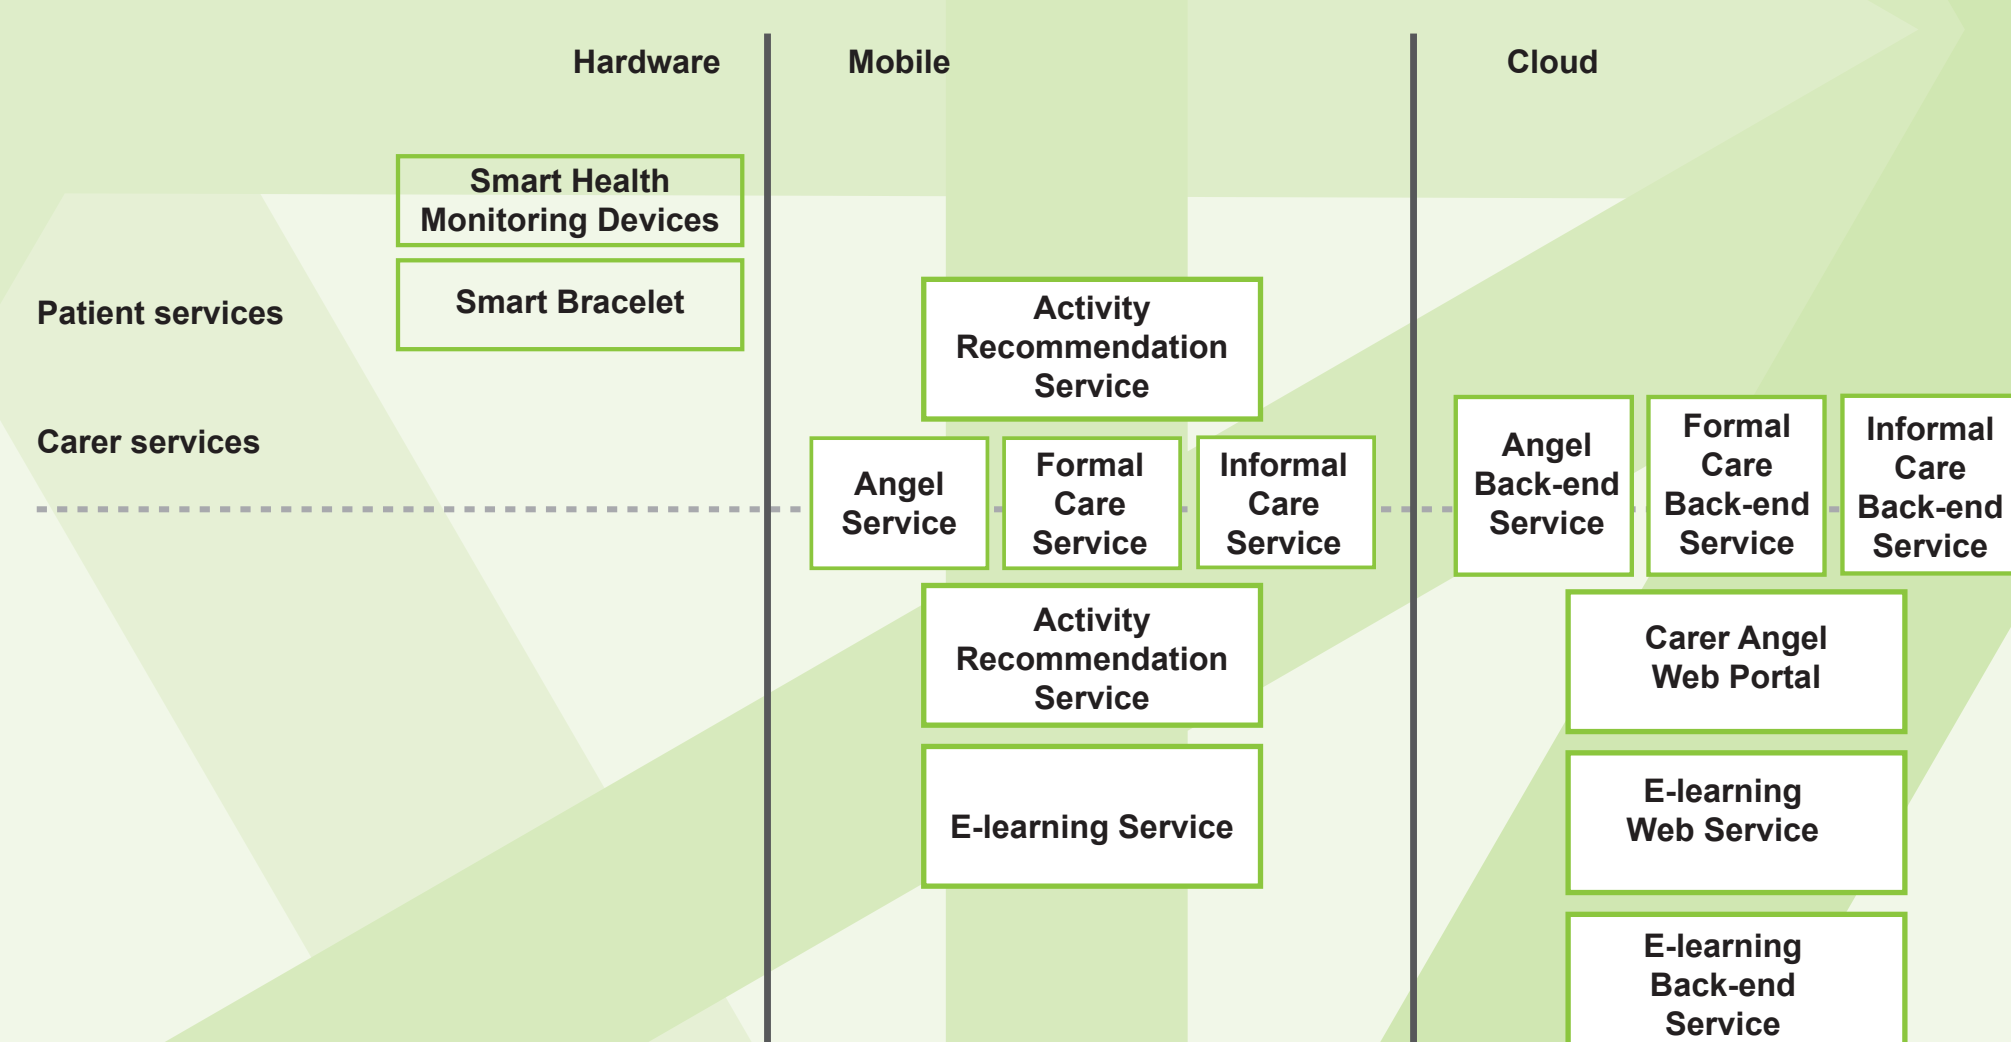

- patient to patient services;
- patient to care giver services and care giver to patient;
- personal Health Record;
- caregiver to caregiver services.

### How it works?

Many-Me is composed out of 3 layers:

- Hardware layer** composed out of the smart bracelet devices used for monitoring various contextual parameters of the elderly (movement, heart rate, location, etc.) and the smart connected health measurement devices used to determine the health status of the patient when needed.
- Mobile layer** composed out of three sets of services: for carers, for patients and services for carers and patients with very simple-to-use interface specifically designed for seniors.
- Cloud layer** similar to the mobile layer in means of the category of services.

The **Angel web-based** application is primarily meant for the people that take care of the senior during the day. The main functionality consists in seeing on a map where the senior is, launching an alarm if a strange behaviour is detected. It allows also to keep in contact with the senior, to create him an itinerary or even to "remote control" him, a function that sees the position of the senior with maximum precision as well as the direction where

### To summarise what is Many-Me?

Many people like Me! – gives comfort to the end-users, patients or caregivers, so they are not struggling alone and they can easily get help with the tap of a (virtual) button. Moreover and above this, **Many-Me system helps patients suffering from dementia to connect with people in similar situations through Many-Me matchmaking capabilities – to learn and exchange experiences, make new friends and engage together in pleasant activities.**

The Many-Me project (AAL/Call2016/Many-Me/1/2016) is funded by AAL Programme, co-funded by the European Commission and National Funding Authorities of Austria, Cyprus, The Netherlands, Poland, Romania and Switzerland.
